

Abstract

The invention relates to a bicycle tube tire comprising a tubular casing (2) closed in an annular manner, a rubber tread (4), an air sealing means (1) and a webbing (3). To fix the bicycle tube tire onto the rim simply and quickly, the webbing (3) is made of a fabric comprising reinforcement carriers extending at least in the circumferential direction of the tire and made of a material which contracts when dampened with water or an aqueous solution and subsequently dried.
